

Pevco Link™

Touch Control with Barcode Tracking

With intuitive functions, an easy to read display, built-in directories and convenient barcode tracking, **Pevco Link** makes sending pharmaceuticals, specimens and blood products fast, safe and simple.

Bright, contrasting graphics make it easy to complete a transaction with confidence. Large keys are responsive and easy to read, reducing the chance of error.

** Pevco Link is also available without a barcode reader for stations that do not require tracking.*

Deliveries are documented in real time and arrive when and where they are needed – so medical professionals can stay focused on providing the best patient care possible.

Three ways to use Pevco Link

- **Tracked Send.** Know exactly what item was sent, when it left, when it arrived and even who received patient-critical cargo with barcode tracking. Transaction data is easily accessed from the touch control and more detailed records are available through an accompanying web application.
- **Secure Send.** Ideal for sending sensitive items without barcode tracking, a 3-digit code must be entered at the receiving station before the carrier drops into the bin.
- **Standard Send.** No authorization or barcodes required. Simply select the carrier destination using a shortcut button, directory menu or keypad.

Features:

- Built-in **A to Z Directory** provides a complete list of station addresses that is easy to use and update
- Twelve **Shortcut Keys** – customizable for each station – make sending to the most frequent destinations simple
- Large **Keypad** for users who prefer to enter station addresses directly
- Integrated **barcode reader*** for tracking and documentation of high-value items
- User-friendly **web application** for real-time review of all barcode tracked transactions
- Send and request **empty carriers** with the touch of a button
- Important messages, like **Secure carrier arrived**, are easily visible in large, bold graphics
- Access special features and instructions with the **Options Key**
